

How to Invalidate a COMPASS Application when the application is registered and the Web ID is not attached

If you register an application without attaching the Web ID, you can invalidate it to remove it from WALI. Go to WADE (page after WALI), where there are R's change them to I's. Then press Shift and F9 simultaneously. The message will come up **"Update Completed Successfully."** This will remove them from WALI. Remember to document the application/case with the Web ID.
